California Cactus Nursery

14427 Kittridge Street, Van Nuys, California

Albert Krejci, Horticulturist

Price List for 1937

Please Note: The leading idea in compiling this list was: We would like to be a **STEADY AND RELIABLE SOURCE OF SUPPLY** to all those who are using these interesting plants for decorative purposes.

All prices F. O. B. Van Nuys, California. For parcel post shipments add 15% if west of the Mississippi River, 20% if east of the Mississippi. Otherwise parcels will be shipped by express with charges collect.

TERMS: Cash with the order. On orders of \$5.00 or over we will allow a 5% discount in additional plants of your selection.

CACTI

OUR OUTSTANDING SPECIALTY FOR 1937

Chamaecereus silvestrii forma aurea. Something new! A bright canary yellow form of the "peanut cactus" attracting more attention in our greenhouse than any other plant. It keeps this color all the time. Small grafted plants, 75c each.

Small succulents of every description in endless variety of forms and colors for miniature containers are offered in two sizes: For 1-inch pots and for 2¼-inch pots. Smaller size: Collection J-1, 100 plants for \$1.25, unlabeled. Larger: Collection J-2, 100 plants (*Sedums*, *Crassulas*, *Echeverias*, *Mesem's*, *Sempervivums*, *Stapelias*, etc.) for \$1.75, prepaid.

SHORT GROWING INSTRUCTIONS

Good drainage is always essential. Give plenty of light, but protect your plants from direct burning sunlight in summer time. Don't allow your pots to dry up when the plants are growing. Water sparingly when they are resting or dormant. For planting use a mixture of one-third coarse sand, one-third of fine old screened leaf mold, and one-third of good garden or potting soil. Add traces of lime (old mortar, etc.) and charcoal. With this mixture fill the pot up to one inch, more or less; over this mixture put a layer of sand and plant. Water very carefully until your plants get established and show signs of active growth. For propagation by cutting: Plant your cuttings in clean sand, keep in shade and in case of *Crassulas*, *Asclepiads* and *Mesembs* of more succulent types do not water until your cuttings begin to root.
